

A METHOD OF RECORDING AUDIOVISUAL CONTENT IN A  
COMMUNICATIONS NETWORK

A B S T R A C T

5

According to the invention, said communications  
network including at least one network recorder able to  
record audiovisual content broadcast on a plurality of  
broadcast channels, said audiovisual content being  
10 recorded at the request of a user having a communications  
terminal able to communicate with at least one network  
recorder, said method comprises the following steps:

- the network recorder identifying itself,  
indicating at least:  
15           \* a means of access to said recorder,  
            \* a list of broadcast channels,  
            · the user selecting a network recorder able to  
record at least one required audiovisual content and  
connecting thereto using said access means in order to  
20 request the recording of said at least one audiovisual  
content, said request including an identification of the  
audiovisual content to be recorded, and  
            · the network recorder sending a response to the  
user's recording request containing, if the request is  
25 accepted, an identification of the accepted recording  
request for each content to be recorded.

Application to remote recording of audiovisual  
content.
